INTERDISCIPLINARY ACTIVITY

Sarah’s Sister
Students will explore the importance of storing medication safely. They will analyze a scenario and make a recommendation for how a teen girl should respond when her younger sister has taken medication that was not properly stored. After learning more about how to respond to a medical emergency, students will revise their recommendations, if appropriate. As an extension, students will conduct research and develop a safety plan for the teenager’s household.
Modeling safe storage and use can guide children to make more informed choices when they are old enough to take medications on their own. Knowing exactly how medications affect the body – and how our body reacts to medications – can help explain how important it is to make responsible decisions when introducing any type of medication into the body.

Every year, many children are seen in the emergency room after consuming medications that are improperly stored. It is important to know what steps to take when a child unexpectedly locates or consumes medication not prescribed to them. When a child has misused medication, it is important to contact the appropriate experts (i.e. Poison Control Center or 9-1-1) and communicate key details (e.g. description of the child’s condition, the child’s age and weight, the name and approximate amount of the medication consumed, and when the medication was consumed). To keep children safe, medication must be stored properly.

**National Health Standards**

Students will comprehend concepts related to health promotion and disease prevention to enhance health.

1.5.5 Describe when it is important to seek health care.

Students will demonstrate the ability to access valid information, products, and services to enhance health.

3.5.1 Locate resources from home, school, and community that provide valid health information.

Students will demonstrate the ability to use decision-making skills to enhance health.

5.5.2 Analyze when assistance is needed in making a health-related decision.

**Common Core English Language Arts**

CCSS.ELA-LITERACY.W.4.2

Write informative/explanatory texts to examine a topic and convey ideas and information clearly.

CCSS.ELA-LITERACY.W.4.3.B

Use dialogue and description to develop experiences and events or show the responses of characters to situations.
Distribute a Journal Student Handout to each student. Display the Medication Images 1-4 Teacher Resource that show improperly-stored medications (e.g. on a nightstand, in a purse on the floor, in an unlocked medicine cabinet, on the kitchen counter) one at a time. Each time you post a picture ask, “What do you see happening?” Have students record their ideas in their journals.

Allow students to share their ideas with the class. After the class discussion, repost images one at a time and highlight the improperly-stored medications.
EXPLORE

Tell students they are going to perform scenes to explore a scenario describing how siblings approached a potential health emergency.

**Summary of Scenario:**
- Sarah is babysitting her younger siblings. When she notices her sister Shelly is missing, she looks for her. Eventually, she finds her standing in her parent’s bedroom holding an open prescription bottle with pills scattered around her on the floor.

Put students in groups of four and distribute a [Sarah's Sister Script Student Handout](#) to each student. Assign each student a role in the script: Sarah, Nelsey, Steven/Narrator, and Scott/Scene. Students should highlight their role in the script. If needed, review the elements of a script with the students (see table below) and allow time for students to ask questions.

Invite students to work in their small groups to perform the scenes according to their roles.

<table>

</tr>
</tbody>
</table>

O.S. indicates that the character is off screen when talking (e.g. phone call)<br>The first time a character is introduced the name is in all CAPS
**EVALUATION**

**PART 1**

**Pre-assessment** - Distribute a [Help Sarah Decide Student Handout](#) and yellow highlighter to each student. Direct students to work individually to highlight in yellow the immediate steps that Sarah might take to help her sister Shelly. Instruct students to keep this handout to revisit later in the lesson.

**Explain:**
Tell students that they are going to classify a group of actions into two categories. Category 1 includes the immediate actions Sarah should take to help her sister. Category 2 will include actions Sarah should take after she helps her sister. The list of actions in each category does not need to be in any particular order at this time.

Read aloud the first two actions listed (read the prescription label and go get her other siblings) and model your thinking out loud as to how you would sort them.

- For example, **read the prescription label** should be placed in Category 1. Clarify that Sarah should read the prescription label right away to identify what medication her sister found so she can tell that information to an adult. **Go get her siblings** should be under Category 2. Later, she can go get her other siblings and let them know what is happening, but Shelly needs medical attention first.

- Present a third action (**call the local Poison Control Center or 911**) and ask for student volunteers to categorize the action and explain their thinking. Repeat this with all the actions listed. Do not validate student ideas as the categories are created. Accept all student responses and allow students to revisit and re-categorize actions as new ideas are shared.

Once the two categories are completed, ask, “Do we need to add or eliminate any actions?” Make any edits to the lists based on the class discussion. Anticipated answers are included in the table below.

**Actions:**

- Read the prescription label.
- Go get her other siblings
- Call her parents.
- Call the local Poison Control Center or 911.
- Try to make Shelly throw up the medication.
- Contact a neighbor
- Ask Shelly if she has taken any of the pills, and count the pills on the floor.
- Determine the name and quantity of the medication.
- Think about how much time has passed since she last saw Shelly.
EVALUATION PART 1: ANSWERS

Action Categories (Answers)

<table>
<thead>
<tr>
<th>Category 1</th>
<th>Category 2</th>
</tr>
</thead>
<tbody>
<tr>
<td>○ Read the prescription label.</td>
<td>○ Go get her other siblings</td>
</tr>
<tr>
<td>○ Call the local Poison Control Center or 911.</td>
<td>○ Call her neighbor.</td>
</tr>
<tr>
<td>○ Ask Shelly if she has taken any of the pills, and count the pills on the floor.</td>
<td>○ Try to make Shelly throw up the medication.</td>
</tr>
<tr>
<td>○ Determine the name and quantity of the medication.</td>
<td></td>
</tr>
<tr>
<td>○ Think about how much time has passed since she last saw Shelly.</td>
<td></td>
</tr>
</tbody>
</table>

Once the class has determined the immediate actions Sarah should take listed in Category 1 ask them, “What do you think Sarah should do first?” Use the information provided below to work with students to clarify a logical sequence of immediate actions.

Example of Logical Sequence of Immediate Actions Sarah Should Take

<table>
<thead>
<tr>
<th>Action</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Call the local Poison Control Center.</td>
<td>Sarah should call the Poison Control Center first so they can guide her to help Shelly.</td>
</tr>
<tr>
<td>Read the prescription label.</td>
<td>Sarah needs to let the Poison Control Center staff know the name of the medication because the type of medication Shelly has taken could impact what Sarah does next.</td>
</tr>
<tr>
<td>Determine the name and prescribed quantity of the medication.</td>
<td>It is important for Sarah to read what is on the prescription label. The prescription label will let her know how much medication was in the container. This helps the Poison Control Center staff determine the worst-case scenario.</td>
</tr>
<tr>
<td>Ask Shelly if she has taken any of the pills and count the pills on the floor.</td>
<td>This will help Sarah estimate how much of the medication Shelly has taken, if any.</td>
</tr>
<tr>
<td>Think about how much time has passed since she last saw Shelly.</td>
<td>If Sarah provides this information, the Poison Control Center staff can estimate how long the medication has been in Shelly’s body.</td>
</tr>
</tbody>
</table>

Clarify with students that, if Shelly was experiencing issues that prevented her from communicating with Sarah, (e.g. difficulty breathing, not able to talk or move properly, won’t wake up) her first action would be to call 9-1-1 and not the Poison Control Center. Also, explain that inducing vomiting to remove medication from the stomach before it absorbs is no longer the standard recommendation. Inducing vomiting is rarely recommended because it has not proven to be more effective than alternative treatments.
**EVALUATION**  
**PART 2**

**Post assessment** – Distribute a blue highlighter to each student, and invite students to take back out their Help Sarah Decide Student Handout. Have students use information from the classification activity to revise their proposed actions to Sarah, using the blue highlighter.

**Extension:**  
Explain to students that, every year, many children under five (mostly two-year-olds) are seen in the emergency room after consuming medications that are improperly stored. Show the Safe Kids Worldwide: Simple Steps to Safe Medicine storage video (1:06) at https://www.safekids.org/video/simple-steps-safe-medicine-storage to reinforce that these accidents could be prevented by properly storing medications.

Invite students to conduct online research to identify ways to safely store medications. They should focus on major steps parents should take to prevent children from accessing and misusing medication. Allow them to communicate their understanding by developing a medication safety tips presentation for Sarah’s parents.

**Sample of safety tips:**

- Confirm prescription medication is stored properly in your household. Somewhere that is too high for young children to reach or see is ideal.

- Re-lock the safety cap of medicine bottles each time they are opened.

- Dispose of unused prescription medication to prevent misuse.

- Follow the instructions, and don’t take more than what is prescribed.

- Don’t mix medications.

- Don’t give prescription medication to someone else, and don’t take other people’s medications.
WHAT DO YOU NOTICE?

Directions: Work with your group to perform the scenes below.

FADE IN:

Scene: INT.-NIGHT-LIVING ROOM

Narrator: SARAH is on the couch watching television with her younger brothers STEVEN and SCOTT. Her cell phone rings. It is her friend NELSEY. She answers the call. While talking on the phone she notices her little sister Shelly has wandered off.

SARAH  
(RING, RING)  
Hello.

NELSEY (O.S.)  
What’s up girlie? Want to come over?

SARAH  
(Sighs)  
I can’t I am babysitting for my parents. What are you doing?

NELSEY  
I just got finished painting my nails. I am about to ask my mom if I can make a sundae.

SARAH  
That sounds fun. We are all watching a movie. Wait. SHELLY? Shelly! Nelsey, let me call you back. I need to go find Shelly. Guess she wandered off when I wasn’t looking.

Scene: INT.-NIGHT-KITCHEN

Narrator: Clutching her phone, Sarah hops off of the couch and walks to the kitchen to look for her little sister Shelly.

SARAH  
Shelly. Are you in here?

Scene: INT.-NIGHT-HALLWAY

Narrator: Sarah walks up and down the hallway.

SARAH  
Shelly! Shelly! Where are you?

Scene: INT.-NIGHT-BATHROOM

Narrator: Sarah starts to get nervous. She turns on the bathroom light and pulls back the shower curtain.

SARAH  
Shelly. Are you hiding from me? Shelly!  
This is not funny. Please come out.
Scene: INT-NIGHT-PARENT'S BEDROOM

Narrator: Sarah runs into the room and finds her sister holding an empty prescription bottle. Pills are scattered on the floor around Shelly.

SARAH
(Grabbing the pill bottle)
Shelly. Where did you get this? Did you take any of the pills?

FADE OUT:
HELP SARAH DECIDE

NAME: ________________________________________________

DATE: ________________________________________________

Step 1: Use your yellow highlighter to indicate the immediate steps you think Sarah should take to help her sister.

SCENARIO
Sarah finds her sister standing with an empty prescription bottle. There are pills scattered on the floor.

- Call the Poison Control Center or 911
  - OR
  - Call her neighbor

- Read the prescription label to determine the name and prescribed amount of the medication
  - OR
  - Search the house for other improperly stored medications

- Try to make Shelly throw up the medication
  - OR
  - Try to determine how much time has passed since she last saw Shelly

Step 2: If needed, use your blue highlighter to modify your initial recommendations to Sarah.
